

Features of new version

The calculation of purchasing power has been adjusted according to the updated commission rates of the Moscow Exchange Equity and Bond Market.

Issues resolved in 10.1.0

1. OMS order entry form took a long time to be opened.
2. The error of profit/loss calculation in the **Buy/Sell** table occurred when the average weighted price currency functionality was used.
3. The terminal crashed if a non-existing class was specified in the ClientContextMenuScheme.xml file, in the Classes list for the menu item of OMS order execution on the exchange.
4. Algo orders were loaded incorrectly via transaction pocket on some of the trading venues.
5. In some cases, an exchange commission was not displayed in the terminal.
6. The following case is supported: an instrument in the market maker's liability is changed while the current status of liabilities is updated.

Issues resolved in 10.0.2

In some cases, it was impossible to execute transaction for entering an order through the TRI file and Trans2Quik. There was "Trading account is specified incorrectly" error.
