

Issues resolved

1. The process of calculating the **Client portfolio** table has been optimized.
2. The **Transfer order** attribute was missing or unavailable for edit on the order entry form "FUTSPREAD" (MOEX Derivatives: Features Spread). The problem occurred only when using the "Classical" and "Specialized" display modes of entry forms.
3. The automatic substitution of the trading account by the selected client code was not executed on the order entry form by the "REPO with CCP" classes.
