

Features of new version

The **Away** user status is supported for Messaging module.

Issues resolved

1. Long messages from the Messaging module that did not fit on the screen were considered unread.
2. In the specialized order entry form (for the enabled **Specialized** mode in the order entry form settings) for bonds, when calculating the price based on yield by pressing the **Set price** button, the price value was calculated with an accuracy of 2, not with accuracy of the instrument.
