

Changes in CoLibri risk manager terminal module 4.7.0

Features of new version

1. Closing positions on FX market.

Accounting of currency positions when preparing orders to close positions is realized for clients using 'by discounts' lending scheme and 'cash' scheme of calculations on FX market. Activation of this feature, specifying a class and a list of instruments used for closing positions on FX market are available through settings of CoLibri risk manager terminal module in QUIK Workstation. See description in sub-sections 1.4 and 6.3.2 (option **Enable closing currency positions**) of User's manual for CoLibri risk manager terminal module.

2. Sending Margin calls for planned position.

Improved logic of sending Margin calls which are now sent only for planned position of clients even though margin parameters are calculated for all available limit kinds.
