

Corrected defects of the previous versions

1. When working with tabs certain windows changed their location.
2. When switching between tabs and activating the main program window location of reduced windows.
3. Problems of setting restrictions on derivatives market occurred in situations when broker used irrelevant version of trading interface to MOEX derivatives market.
4. Emergency work termination of the program occurred when exporting Trades table via ODBC.
5. Field 'Quantity' of new order form was filled incorrectly when submitting an order from Buy/Sell table.

Fixed errors in functions of embedded programming languages LUA and QPILE:

1. Function OnTransReply did not return parameters sec_code and class_code when receiving a response to client transaction.
2. Function OnTransReply returned price value without separator when receiving a response to client transaction.
3. Parameter order_num (Order number) was not presented through transaction parameters.
4. Incorrect value returned (for example, 'shortname') when requesting certain parameters from Quotes table in Lua and QPILE.
