

Corrected defects of the previous versions

1. Selected price shift was accounted incorrectly when submitting an order from the Level II Quotes table in fast entry mode.
2. Several trades executed at the same price were displayed on tick graph as a single candlestick.
3. 'Lua scripts' menu item was not displayed when running the Workstation under Windows XP.
4. Loading a *.tab file (tabs settings) from the previous versions resulted the emergency work termination of the Workstation.
5. Problems of displaying data in table when working under OS Windows 10.
6. Settings of trend line could not be saved when copying.
7. New algo order form could not be called through the context menu of Level II Quotes table when setting **Program \Context menu \ Right-click - Context menu** was enabled.
8. Certain positions on client accounts were not displayed in Cash positions table.
