

Corrections of the previous versions defects

1. An error resulted in increased RAM consumption when open Client portfolio and Buy/Sell tables existed.
2. Slow operation of the QUIK workstation when switching between the clients in the list of the general filter.
3. Abnormal shutdown occurred trying to download configuration containing saved trendlines in the charts.
4. Abnormal shutdown occurred when starting a program.
5. The calculation algorithm of the maximum number of buy/sell orders in the order entry form has been changed in order to support the trading system upgrade of the derivatives market at the Moscow Exchange. The principle of calculating the futures collateral which can be up to 3L (three limits of the price) has been changed.
6. A problem occurred and current cross rates were taken into account instead of the initial ones when evaluating the opening positions in the Client portfolio.
