

Changes in QUIK Workstation 7.16.3

Features of new version

The new parameters **Security type** and **Security subtype** were added to the Quotes table in addition to the **Type of security** parameter. Detailed information on the type and subtype of a financial instrument is transmitted in these new parameters.

In the first phase, these data will be transmitted only for a limited list of classes (which are transmitted by some trading / informational interfaces).

Issues resolved

Zeroing of the weighted average purchase price while loading or adjusting limits from a file.
