

Changes in QUIK Workstation 8.1.0

Features of new version

The **REPO basket** subtype of instrument was added in the **Subtype of instrument** column of **Quotes table**.

Issues resolved

1. A QUIK workstation stopped responding in some cases.
2. Fixed incorrect names of some parameters of **Quotes table**.
3. When the QUIK workstation read a file with corrected limits, the recording of new data to this file was blocked.
4. DDE export errors might occur if export stopped and restarted.
5. Errors in the calculation of the **max** button in the dialog box for entering a new order for clients using the MD + lending scheme:
 - in some cases, the maximum quantity was not calculated;
 - the setting **Based on own assets only** was not taken into account, the full margin limit was displayed.
