

Changes in CoLibri risk manager terminal module 4.21.0

Features of new version

1. In the table of orders for position closing **Volume** and **ACI** fields were added.
2. In the database of sent notifications values of RCV1 and RCV2 can be saved now.

Issues resolved

1. In the manual clarifications were added about the format of the file of notifications on risk parameters of derivatives market.
2. The program performance was optimized.
3. The methodology of calculating the price when orders for position roll over are created using the REPO modes was changed. As a result, the calculated volumes of the orders for position roll over will be more accurate.
