

Issues resolved

1. In some cases when using the **Templates for rollover** setting a client for currency position rollover was selected incorrectly.
2. **Not enough assets for complete rollover** error occurred when rolling over the position, if the close price was missing.
3. Data receiving is optimized. It speeds up the Terminal service.
4. When rolling over the orders in the Repo with CCP mode the counter order was placed with incorrect parameters as a result the orders were not matched.
