

Features of new version

1. Supported currency instruments traded in cents. Changes affected the algorithms of position closing and rollover.
2. Changed the algorithm of position rollover when instruments traded in Repo (NDM) classes with different settlement currencies are used.
3. In the position closing mode "By adequacy funds level", different values of adequacy funds level may now be set for different client categories (Client with a high level of risk, Client with a standard level of risk). For details, see the User's manual, sub-section 6.4.1.
4. Margin templates (leverage values) may now be specified in margin call settings. Margin calls will be sent to clients with a leverage from the list. For details, see the User's manual, sub-section 6.1.

Issues resolved

There was a wrong description of the MsgText field of the database table for storing sent notifications in the User's manual.
