

Issues resolved

1. Quantity input buttons did not operate in the specialized entry form.
2. Volume value was changed in the order entry form if this entry form was opened for the previously placed order.
3. After an update in several tables (for example in the **Cash positions** and **Positions in instruments** tables) line height was changed when using a font larger than the standard one.
4. After an update the QUIK Workstation did not run on the Wine and macOS, with the following diagnostic: "info.exe file is damaged". Using Windows emulator Wine version 5.0 or newer allows to run the program correctly.
5. In some cases, the error occurred: "[5159] QMInitMarginalActv failed".
6. QUIK Workstation terminated abnormally.
7. Error caused the funds currency and settlement currency were not updated in the OMS order entry form when selecting the instrument with another currency.
8. "Failed to get Security Storage Index" error occurred when attempting to place the OMS order using **BUY** and **SELL** buttons.
