

## Features of new version

The logic of sending notifications to clients with the Unified cash position in derivatives and stock markets was changed. Notifications are not more sent to clients who make no trade transactions in the derivatives market (have zero balance of the derivatives market positions).

## Issues resolved

1. The message saying that notification templates were not set and the file was not found was mistakenly shown at each start of the QUIK workstation.
2. The error of closing positions in the derivatives market.
