

Features of new version

Margin indicators calculated according to the net method are added to the **Client portfolio** and **Account state** tables:

- Init. margin net;
- Min. margin net;
- RCS1 net;
- RCS2 net.

For more information, see sub-sections 3.5, 3.12 of the QUIK User's Manual Chapter 3, "Viewing Information".

Issues resolved

1. Incorrect work of the instrument filter in the **Offering and buyback orders book** table.
2. The DNS name could not be set in the proxy server settings.
3. The client code substitution did not work in the **REPO basket** mode.
4. The Margin Call mode was mistakenly activated in the CoLibri risk manager terminal module when the client used available funds to purchase instruments that the client did not own.
